Writing

-Understand that the PhD is just a basic research book or collection of research articles, nothing more. De-mystification of the PhD!!

-Articles on a side

-Best advice I have gotten: When you are done with writing an article and waiting for replies, start a new one.

-General publications

-Ebooks and books

Remember, when you apply to somewhere people will say:

”Nice you have a PhD, what else have you done?”

What is the repply you want to give to them?

Connections

- Different universities
- Ministry of that and that
- Embassies
- Parliament members and elects + support staff
- Look for talents, contact writers if you read great books
- Contact metodologists and theory builders
- Research groups
- Find the classical and most used research materials, contact those who made them
- Contact funders and industries

Funding

The effect of successful projects stack credibility.

During the PhD, there are tens or a hundred chances per year to send almost identical papers to different foundations and supporting adversaries to get funding. Many of these chances will not exist after the PhD, but their cumulative effect will stack for the credibility for the post doc (at least 5 years).

Extra overthinking

- Self reflection and calmness
- If you make every week something substantial it is ok, days don't matter, but weeks do.
- Know how your memory works. (Sensor capabilities, sensor logic)
- Try many alternative roads, not everything hard can be a success
- Intuition (Intuition unleashed, Asta Raami)
- Dedication and iron will
- Understanding stress and pressures (stress can be helpful too)

Thank you,
